

U.S. Application No. 09/457,732  
Docket No. YOR919990137US1

2

**AMENDMENTS TO THE CLAIMS:**

1. (Previously presented) A method of processing semiotic data, comprising:  
receiving semiotic data including a data set P;  
selecting a function h, and for at least one of each said data set P to be collected,  
computing h(P);  
destroying said data set P;  
storing h(P) in a database, and  
to determine whether P' is a predetermined subject, comparing h(P') to available h(P)s to  
determine whether there is a match,  
wherein said data set P cannot be extracted from h(P).
2. (Original) The method according to claim 1, wherein said semiotic data comprises  
biometric data.
3. (Original) The method according to claim 1, wherein said function h comprises a secure  
hash function.
4. (Canceled).
5. (Previously presented) A method of processing semiotic data, comprising:  
receiving semiotic data including a data set P;  
selecting a function h, and for at least one of each said data set P to be collected,  
computing h(P);

U.S. Application No. 09/457,732  
Docket No. YOR919990137US1

3

destroying said data set P; and

storing  $h(P)$  in a database,

wherein said data set P cannot be extracted from  $h(P)$ ,

the method further comprising:

selecting a private key/public key (K, k) once for all cases; and

one of destroying said private key K and sending said private key K to a trusted party;

and

choosing said function h as the public encryption function corresponding to k.

6. (Original) The method according to claim 5, wherein said data set P cannot be extracted from  $h(P)$ , except by the trusted party.

7. (Currently amended) The method according to claim 5, further comprising:  
to determine whether some  $P'$  is a predetermined subject, comparing said  $h(P')$  to all available  $h(P)$ s; and  
determining whether there is a match.

8. (Original) The method according to claim 5, wherein the trusted party comprises a panel of members, and  
wherein a secret is shared among the members so that only at least a predetermined number of panel members can reconstitute the secret in its entirety by putting together their share of the secret.

U.S. Application No. 09/457,732  
Docket No. YOR919990137US1

4

9. (Previously presented) A method of processing semiotic data, comprising:
- receiving semiotic data including a data set P;
  - selecting a function  $h$ , and for at least one of each said data set P to be collected,
  - computing  $h(P)$ ;
  - destroying said data set P; and
  - storing  $h(P)$  in a database,
- wherein said data set P cannot be extracted from  $h(P)$ ,
- wherein the data set P is not determined perfectly by its reading,
- wherein each reading gives a number  $P_i$ , wherein  $i$  is no less than 0, wherein  $P_0$  is for an initial reading, and a secret version of said initial reading is stored after further processing thereof,
- wherein reading  $P_0$  is different from  $P_i$  for  $i > 0$ , and the secret version of  $P_0$  is different from the secret version of  $P_i$ , such that no identification is possible by a direct comparison of the encrypted data.
10. (Original) The method according to claim 9, further comprising:
- extracting sub-collections  $S_j$  from the collection of data in data set P; and
  - encrypting a predetermined number of such sub-collections such that at least one of the sub-collections is reproduced exactly with a predetermined probability.
11. (Original) The method according to claim 10, further comprising:
- comparing encrypted versions of the sub-collections  $S_j$  with those data stored in said database,

U.S. Application No. 09/457,732  
Docket No. YOR919990137US1

5

wherein if one or more of the sub-collection  $S_j$  matches with said data, then verification is deemed to have occurred.

12. (Original) The method according to claim 11, further comprising:

each time a  $P_i$ , with  $i > 0$ , is read, computing all possible predetermined size variations of  $P_i$  which correspond to an acceptable predetermined imprecision of the reading; and  
encrypting all such modified data, and comparing said encrypted modified data to data stored in said database.

13. (Original) The method according to claim 12, wherein for a plurality of users of the same biometric information, said biometric information is encrypted differently for each user.

14. (Previously presented) The method according to claim 1, wherein at least one of said data set  $P$  and  $P'$  comprises a personal data set.

15. (Previously presented) A method of processing biometric data, comprising:  
acquiring unencrypted biometric data including at least one data set  $P$ ;  
encrypting, with one of a secure hash function and an identity function, each said at least one data set acquired;  
destroying the unencrypted data set  $P$ ;  
storing each of the at least one encrypted data set in a database,  
wherein unencrypted biometric data is not available nor retrievable from said data stored in said database, and

U.S. Application No. 09/457,732  
Docket No. YOR919990137US1

6

to determine whether a data set P' is a predetermined subject, comparing an encrypted data set of P' to the at least one encrypted data set stored in the database to determine whether there is a match.

16. (Previously presented) The method according to claim 15, wherein at least one of said data set P and P' comprises a personal data set.

17. (Previously presented) A method of extracting components of biometric data which are stable under measurement errors, comprising:

acquiring unencrypted biometric data including at least one data set P;

encrypting each said at least one data set acquired to form at least one encrypted data set;

destroying the unencrypted data set P;

storing each said at least one encrypted data set in a database,

wherein unencrypted biometric data is not available nor retrievable from said data stored in said database, and

to determine whether a data set P' is a predetermined subject, comparing an encrypted data set of P' to the at least one encrypted data set stored in the database to determine whether there is a match.

18. (Previously presented) The method according to claim 17, wherein at least one of said data set P and P' comprises a personal data set.

U.S. Application No. 09/457,732  
Docket No. YOR919990137US1

7

19. (Original) A method of extracting components of biometric data which are stable under measurement errors, comprising:

acquiring unencrypted biometric data including at least one data set P;

encrypting each said at least one data set acquired to form at least one encrypted data set;

destroying the unencrypted data set P; and

storing each said at least one encrypted data set in a database,

wherein unencrypted biometric data is not available nor retrievable from said data stored in said database,

extracting sub-collections  $S_j$  from the collection of data in said data set P; and

encrypting a predetermined number of such sub-collections such that at least one of the sub-collections is reproduced exactly with a predetermined probability.

20. (Original) The method according to claim 19, wherein said data set comprises a personal data set.

21. (Original) The method according to claim 19, further comprising:

comparing encrypted versions of the sub-collections  $S_j$  with those data stored in said database,

wherein if one or more of the sub-collection  $S_j$  matches with said data, then verification is deemed to have occurred.

22. (Original) The method according to claim 21, wherein a data set P is not determined perfectly by its reading, such that each reading gives a number  $P_i$ ,

U.S. Application No. 09/457,732  
Docket No. YOR919990137US1

8

wherein  $i$  is no less than 0,

wherein  $P_0$  is for an initial reading, and a secret version of said initial reading is stored after further processing thereof,

wherein reading  $P_0$  is different from  $P_i$  for  $i > 0$ , and the secret version of  $P_0$  is different from the secret version of  $P_i$ , such that no identification is possible by a direct comparison of the encrypted data.

23. (Original) The method according to claim 21, further comprising:

each time a data set is read  $P_i$ , with  $i > 0$ , is read, computing all possible predetermined size variations of  $P_i$  which correspond to an acceptable predetermined imprecision of the reading; and

encrypting all such modified data, and comparing said encrypted modified data to data stored in said database.

24. (Previously presented) A system for processing semiotic data, comprising:

means for receiving semiotic data including a data set  $P$ ;

means for selecting a function  $h$ , and for each said data set  $P$  to be collected, computing

$h(P)$ ;

means for destroying said data set  $P$ ;

means for storing  $h(P)$  in a database, wherein said data set  $P$  cannot be extracted from

$h(P)$ , and

to determine whether a data set  $P'$  is a predetermined subject, means for comparing  $h(P')$  to available  $h(P)$ s to determine whether there is a match.

U.S. Application No. 09/457,732  
Docket No. YOR919990137US1

9

25. (Previously presented) A system of processing semiotic data as in claim 24, wherein said semiotic data comprises biometric data.

26. (Previously presented) The method according to claim 24, wherein at least one of said data set P and P' comprises a personal data set.

27. (Previously presented) A system for verifying biometric data without storing unencrypted biometric data, comprising:

means for acquiring unencrypted biometric data including at least one data set P;

means for encrypting each said at least one data set acquired to form at least one encrypted data set; means for destroying the unencrypted data set P;

means for storing each said at least one encrypted data set in a database, wherein unencrypted biometric data is not available nor retrievable from said data stored in said database, and

means for comparing an encrypted data set of a data set P' to said at least one encrypted data set of data set P to determine whether there is a match and to determine whether the data set P' is a predetermined subject.

28. (Previously presented) The method according to claim 27, wherein at least one of said data set P and P' comprises a personal data set.

U.S. Application No. 09/457,732  
Docket No. YOR919990137US1

10

29. (Original) A system for extracting components of biometric data which are stable under measurement errors, comprising:

acquiring unencrypted biometric data including at least one data set P; encrypting each said at least one data set acquired to form at least one encrypted data set;

destroying the unencrypted data set P; and

storing each said at least one encrypted data set in a database,

wherein unencrypted biometric data is not available nor retrievable from said data stored in said database,

extracting sub-collections  $S_j$  from the collection of data in said data set P; and

encrypting a predetermined number of such sub-collections such that at least one of the sub-collections is reproduced exactly with a predetermined probability.

30. (Original) The method according to claim 29, wherein said data set comprises a personal data set.

31. (Previously presented) A signal-bearing medium tangibly embodying a program of machine-readable instructions executable by a digital processing apparatus to perform a method for computer-implemented processing biometric data, said method comprising:

receiving biometric data including a data set P;

selecting a secure hash function  $h$ , and for each data set P to be collected, computing  $h(P)$ ;

destroying said data set P;

storing  $h(P)$  in a database, wherein said data set P cannot be extracted from  $h(P)$ , and

U.S. Application No. 09/457,732  
Docket No. YOR919990137US1

11

to determine whether a data set P' is a predetermined subject, comparing h(P') to available h(P)s to determine whether there is a match.

32. (Previously presented) The method according to claim 31, wherein at least one of said data set P and P' comprises a personal data set.

33. (Previously presented) A signal-bearing medium tangibly embodying a program of machine-readable instructions executable by a digital processing apparatus to perform a method for computer-implemented verifying of biometric data without storing unencrypted biometric data, said method comprising:

acquiring unencrypted biometric data including at least one data set P;

encrypting each said at least one data set acquired to form at least one encrypted data set;

destroying the unencrypted data set P;

storing each said at least one encrypted data set in a database, wherein unencrypted biometric data is not available nor retrievable from said data stored in said database, and

to determine whether a data set P' is a predetermined subject, comparing an encrypted data set of P' to said at least one encrypted data set to determine whether there is a match.

34. (Previously presented) The method according to claim 33, wherein at least one of said data set P and P' comprises a personal data set.

35. (Original) A signal-bearing medium tangibly embodying a program of machine-readable instructions executable by a digital processing apparatus to perform a method for computer-

U.S. Application No. 09/457,732  
Docket No. YOR919990137US1

12

implemented extracting components of biometric data which are stable under measurement errors, said method comprising:

acquiring unencrypted biometric data including at least one data set P; encrypting each said at least one data set acquired to form at least one encrypted data set;

destroying the unencrypted data set P;

storing each said at least one encrypted data set in a database, wherein unencrypted biometric data is not available nor retrievable from said data stored in said database;

extracting sub-collections  $S_j$  from the collection of data in said data set P; and

encrypting a predetermined number of such sub-collections such that at least one of the sub-collections is reproduced exactly with a predetermined probability.

36. (Original) The method according to claim 35, wherein said data set comprises a personal data set.
